

VitaStim Grease

Bacterial Cultures & Stimulants to Speed Grease Digestion

VitaStim Grease contains bacterial cultures along with key probiotics for chewing up high levels of grease and fatty acids. The probiotics help to maintain the population of grease digesting bacteria, as well as provide a boost to the native bacteria.

Collection system operators have trusted this product for years. VitaStim Grease has been one of our most commonly used lift station products.

VitaStim Grease is particularly effective in anaerobic systems when paired with Qwik-Zyme L. The catalysts in Qwik-Zyme L break fatty acids into short chains, where they are consumed by the bacteria in VitaStim Grease.

Speeds Digestion of
Fatty Acids

Aerobically or Anaerobically
Breaks Down Grease

Safe and
Easy To Use
